

# DATE METHODS

1.

Write a program that displays current date and time in your browser.

Sat Dec 05 2015 22:18:39 GMT+0500 (PKT)

2. Write a program that alerts the current month in words.  
For example December.

Current month: December

3. Write a program that alerts the first 3 letters of the current day, for example if today is Sunday then alert will show Sun.

Today is Sat

4. Write a program that displays a message “It’s Fun day” if its Saturday or Sunday today.

It's Fun day

5. Write a

program that shows the message “First fifteen days of the month” if the date is less than 16<sup>th</sup> of the month else shows “Last days of the month”.

## First fifteen days of the month

6. Write a program that determines the minutes since midnight, Jan. 1, 1970 and assigns it to a variable that hasn't been declared beforehand. Use any variable you like to represent the Date object.

```
Current Date: Sat Dec 05 2015 22:32:23 GMT+0500 (PKT)
Elapsed milliseconds since January 1, 1970: 1449336743386
Elapsed minutes since January 1, 1970: 402593.53982944443
```

7. Write a program that tests whether it's before noon and alert “Its AM” else “its PM”.

It's PM

8.

Write a program that creates a Date object for the last day of the last month of 2020 and assigns it to variable named **laterDate**.

Later date: Thu Dec 31 2020 00:00:00 GMT+0500 (PKT)

9. Create a date object of the starting date of this Ramadan and alert the number of days past since 1st Ramadan? Note: 1st Ramadan was on June 18, 2015

171 days have passed since 1st Ramadan, 2015

10. Write a program that displays in your browser the seconds that elapsed between the reference date and the beginning of 2015.

11. Create a Date object for the current date and time.

Extract the hours, reset the date object an hour ahead and finally display the date object in your browser.

12. Write a program that creates a date object and show the date in an alert box that is reset to 100 years back?

13. Write a program to ask the user about his age. Calculate and show his birth year in your browser.

14. Write a program to generate your K-Electric bill in your browser. All the amounts should be rounded off to 2 decimal places. Display the following fields:
- a. Customer Name
  - b. Current Month

c. Number of units

d. Charges per unit

e. Net  
Amount  
Payable  
(within Due  
Date)  
f. Late  
Payment  
Surcharge  
g. Gross  
Amount  
Payable  
(after Due  
Date)  
Where,

Net

Amount Payable (within Due Date) = Number of units \* Charges per unit & Gross  
Amount Payable (after Due Date) = Net Amount + Late Payment Surcharge

**-- END --**
